STARFISH COMFORTS

INSTALLATION INSTRUCTIONS

For installation you will need:

Starfish Comforts, bed base, suitable screws, chalk, measuring tape, screwdriver or drill, paper & pen, calculator, a clear workspace.

Step 1

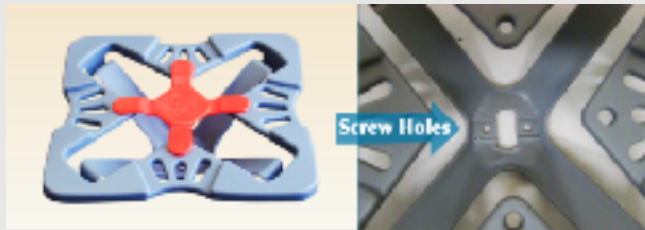

Measure your bed base. Identify suitable spacing in between each Starfish Comfort. The recommended gap size is 20-25mm. Remember, the bigger the gap, the less resistance.

Step 2

Calculate how many Starfish Comforts you will need for each row. Use the Sizing Guide opposite to help you with this. Mark where you will place each Starfish Comfort onto your bed base board with a piece of chalk to help with consistency.

Step 3

Screw the Starfish Comfort in place with a suitable screw. (Screws are not provided with Starfish Comforts). Ensure you select a screw that suits the type of board your surface is made of and its thickness. Secure the screws tight to prevent movement.

Step 4

Clip the red tension balancer in place as shown in the lefthand photo above.

Step 5

Rest your mattress directly on top of the Starfish Comforts. You are done!
